

THIS PAPER DOES NOT REFLECT THE VIEWS OF THE UNITED STATES GOVERNMENT

President's Food Safety Working Group Listening Session
May 13, 2009

Focus on Prevention Breakout Group
Breakout Listening Session Notes

Note: These meeting notes do not represent the views of the United States government, and are only intended to capture the various views of participants, including non-government participants, during the listening session. The points listed below describe these views and do not necessarily represent a consensus opinion of the group.

Moderators:

Joshua Sharfstein, Principal Deputy Commissioner, Acting Commissioner for Food and Drugs; U.S. Department of Health and Human Services' Food and Drug Administration

Dr. Elisabeth Hagen, Deputy Assistant Administrator, Public Health Science; United States Department of Agriculture (USDA), Food Safety and Inspection Service (FSIS)

Participants: Anne Cannon, U.S. House of Representatives; Candice Cho, U.S. Senate; Sandra B. Eskin, Georgetown University Health Policy Institute; Scott Faber, Grocery Manufacturers of America; Ami Gadhia, Consumers Union; Sarah Gallo, National Farmers Union; Bob Hahn, National Meat Assoc.; Phili Karsting, U.S. Senate; Andy Kimbrell, Center for Food Safety; Virgil Miller, U.S. House of Representatives; Erik Olson, Pew Charitable Trusts; Joe Reardon, Assoc. of Food and Drug Officials; Adam Reichardt, Assoc. of State and Territorial Health Officials; Bob Reinhard, Sara Lee Corporation; Michael Robach, Cargill; Deborah White, Food Marketing Institute

Question 1: Do you agree that this Principle should be a priority area of focus for the Obama Administration and that the Principle is framed properly?

- Yes.
- Prevention should be the cornerstone of a new food safety system.
- To guide and assess prevention efforts, we need to develop good metrics of success in prevention, and of the impact of foodborne illness.
- Preventing antibiotic resistance of pathogens is a key element of prevention.
- Preventive controls are needed across the food industry, and the Hazard Analysis Critical Control Points (HACCP) model should be widely adopted.

Question 2: What should be the roles and responsibilities of the federal government, state and local governments, industry, and consumers, individually and in relation to each other?

- Prevention is a shared responsibility across the entire continuum, from farm-to-fork.
- Opportunities for public-private partnerships for education and training should be explored

THIS PAPER DOES NOT REFLECT THE VIEWS OF THE UNITED STATES GOVERNMENT

- Federal Government: develop standards, support research, evaluate risk, and integrate the public oversight system.
- State and local governments: participate fully in preventive efforts, including assessment of preventive controls as part of an integrated system
- Industry: take responsibility for prevention, implement preventive controls, conduct training, and share effective prevention technology.
- Consumers: learn about risks and prepare foods appropriately

Question 3: What new or expanded authorities, if any, should the federal government have?

- The Federal Government should consider preventive controls and a HACCP system.
- The Federal Government should consider equivalent standards for preventive controls for all foods, regardless of origin.

Question 4: What current federal government food safety activities should be expanded, scaled back, or stopped?

- The Federal Government should expand research and training programs, in collaboration with universities.
- The Federal Government should develop good metrics on food safety.
- The Federal Government should consider good manufacturing practices, preventive controls, and HACCP approaches.
- The Federal Government should maintain flexibility in its approach, so regulations do not become outdated quickly.
- The Federal Government should conduct risk analysis and attribute illness to particular foods if possible.
- The Federal Government should assess antibiotic use in agriculture to reduce the development of resistant organisms.

Question 5: What actions should be taken, alone or in collaboration with others, by a) the federal government, b) industry, c) state and local governments, d) foreign governments, and e) others?

- See above

Question 6: What are the obstacles to and opportunities for success?

- Opportunities: consensus on the importance of prevention and the idea of preventive controls; agreement that additional resources are needed in the food safety system.
- Obstacles: prevention is not as exciting as outbreak response, and there is always a risk that key resources will be diverted.
